PRODUCT OVERVIEW

Print Product Overview

MMB Series 'Mill' type hydraulic cylinders are premium quality, heavy duty cylinders which are fatigue-free at their full rated pressure of 160 bar. Designed for use in steel mills and similar demanding applications, MMB Series cylinders incorporate service features such as removable glands and separate bodies with detachable heads and caps to ensure ease of maintenance and low whole-life operating costs. Like all cylinders from Parker Hydraulics, they are designed to deliver long, efficient service with low maintenance requirements, guaranteeing high productivity year after year. Parker's MMB Series cylinders meet the requirements of ISO 6020/1 and CETOP RP58H.

A wide range of optional features is available, permitting MMB cylinders to be customised to suit the most challenging industrial applications. Options include feedback transducers and position switches, integral cushions, oversize ports, stop tubes, stroke limiters, gland drains, rod end protection and more. Where only a totally bespoke cylinder will do, our experienced design engineers will work with you to create a unique customised solution.

- Working pressure up to 160 bar
- Bore sizes – 40mm to 320mm
- Piston rod diameters – 22mm to 220mm
- Strokes – available in any practical stroke length
- 8 standard mounting styles
- 2 rod sizes per bore
- Male and female rod end threads
- Fluids and seals – five seal types to suit a wide range of fluid specifications
- Temperature ranges – -20°C to +150°C depending on fluid and seal types
- Cushions – available at either or both ends
- Wide range of mounting and rod end accessories
- Wide range of special features

Applications

- Steel mills
- Paper mills
- Injection moulding
- Process control

- Lock gates
- Renewable energy
